

Features

To enable multiple use, the Storm's control panel has the following features:

- Automatic power down. Amplifier goes into standby when signal is absent. Reactivates automatically on signal reception.
- Volume adjustment.
- Variable phase dial (0° to 180°).
- 1 pair of low-level RCA inputs.
- 1 pair of unfiltered low-level RCA outputs.
- 2 pairs of unfiltered high-level terminal inputs.
- 2 pairs of unfiltered high-level terminal outputs.
- Crossover enabling/disabling switch to use low frequency management and control from processor.
- Variable and extended frequency adjustment dial (40 Hz to 250 Hz). Allows use of a variety of speakers (mini monitors to full range).
- Detachable power cord.

Embrace your surroundings

storm

s u b w o o f e r

Like its big brother, the Thunder, the Storm has many advanced design features, yet adds a few of its own to facilitate multiple uses.

The front firing driver in the Storm shares external cone topography and materials with the two flanking passive units. We believe this contributes to a more informative and less compressed energy flow. As is the case with the upper echelon Thunder, the Storm is not only designed for cinema/surround applications, but is comfortable in a stereo or multi-channel audio environment.

The Storm benefits aesthetically by offering choice from Totem's four veneers on all faces and has the added benefit of availability in gloss black, matching the Tribe on-wall models.

Totem Acoustic's Storm offers a compact solution to bass augmentation.
